Audit App: User Manual

Version of 18 October 2026 · https://auditapp.heiba.cloud

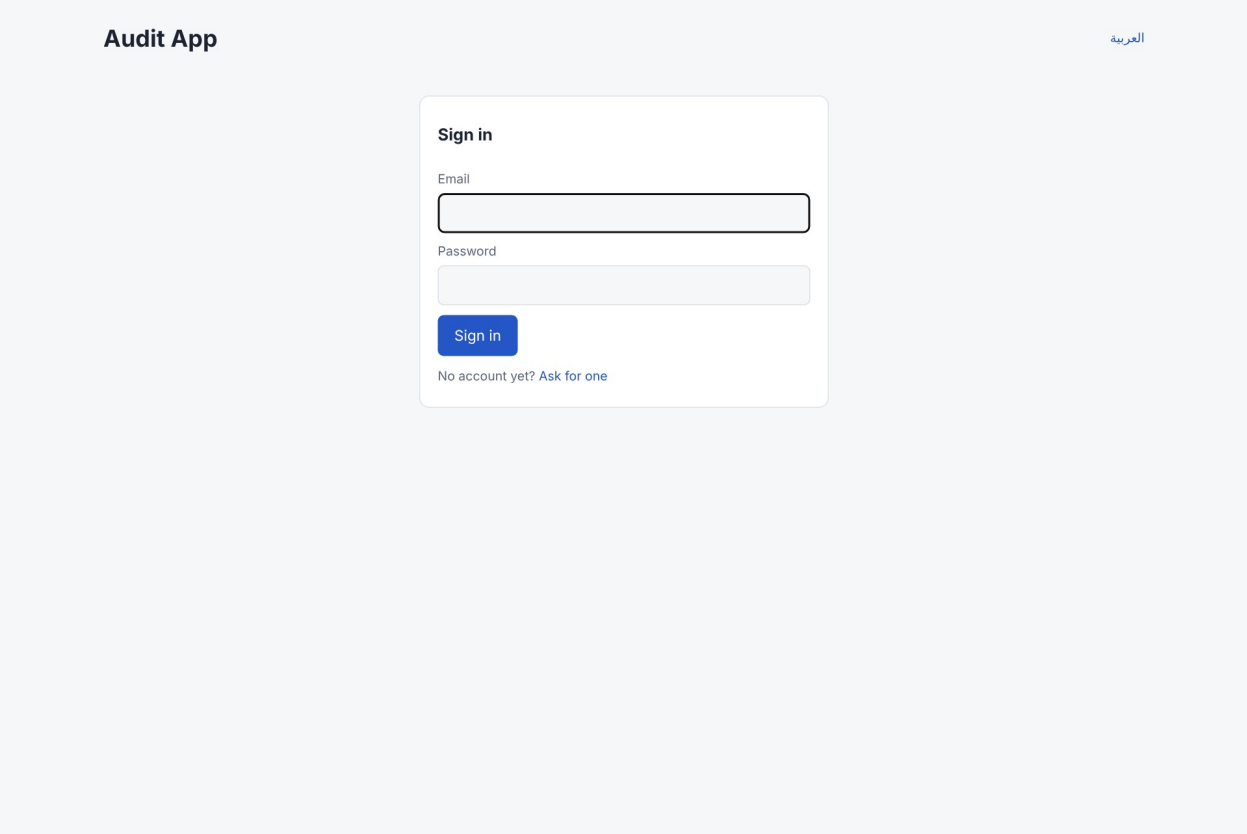

1. About this manual

The Audit App is a web application for running a financial statement audit from planning to the auditor's report. It keeps every client, engagement, file, test, finding and sign-off in one place, and records who did what and when.

This manual walks through the app in the order an audit is usually done. Button and page names are written in **bold** exactly as they appear on screen. If your language is set to Arabic, the same buttons appear in Arabic in the same places.

2. Getting started

2.1 Signing in

The sign-in page

1. Open https://auditapp.heiba.cloud in any modern browser (Chrome, Edge, Firefox or Safari).
2. Enter your email and password and press **Sign in**.
3. Sessions last 12 hours. Five wrong passwords in a row lock that email for 15 minutes.

2.2 Asking for an account

If you don't have an account, press **Ask for one** on the sign-in page and enter your name, email and a password, then **Send request**. You can't sign in until an admin approves the request. The admin chooses your role when approving.

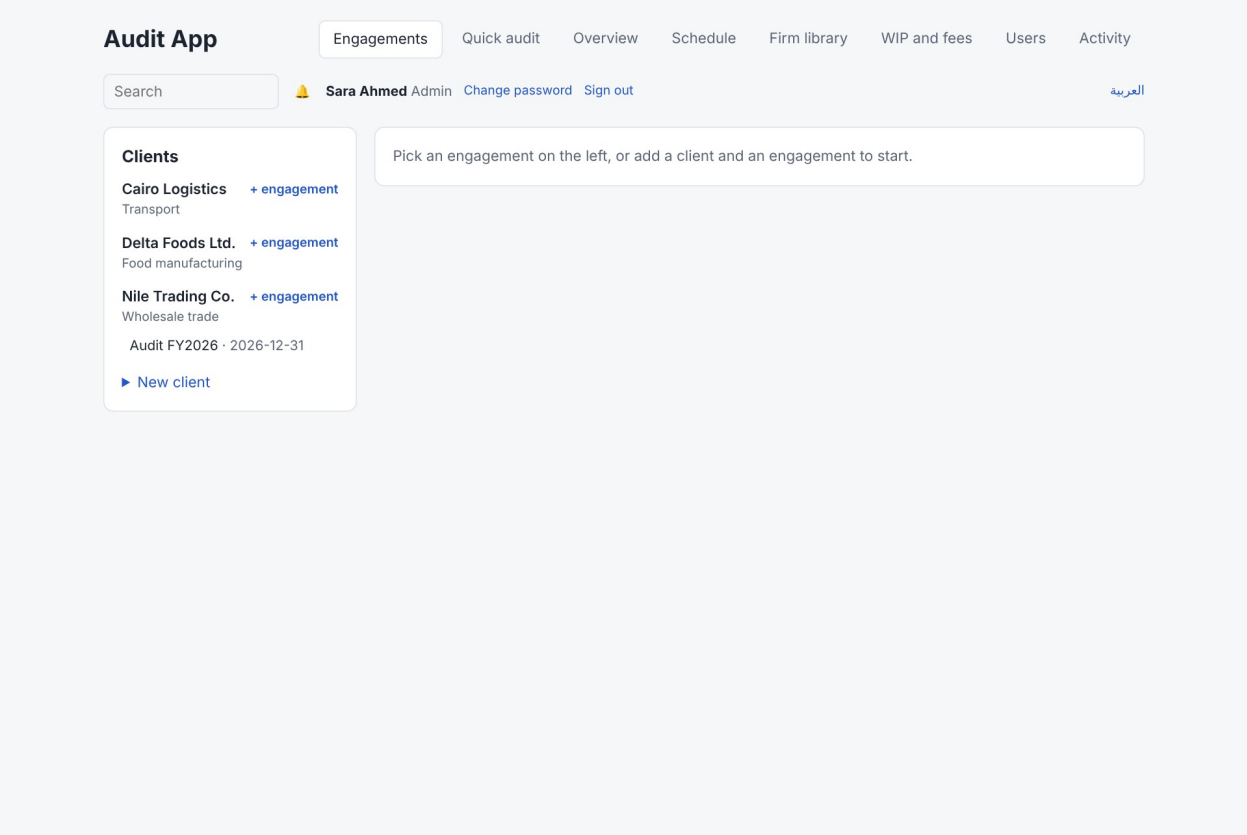

2.3 Language

The العربية / **English** button at the top of every page switches the whole app between English and Arabic. In Arabic the layout runs right to left. Your choice is saved with your account, so the app opens in your language on any device. Figures and dates always use Western digits so they match your source files.

2.4 Your password

Use **Change password** at the top of the page. Press **Sign out** when you finish, especially on a shared computer.

2.5 The top bar

The top bar and the Engagements page

- **Search**: type part of a client, engagement, finding, task or other item and pick it from the list.

- **Bell (What needs you)**: review notes, tasks, client uploads and other items waiting for you. A number shows how many are new.
- **Navigation**: Engagements, Quick audit, Overview, Schedule, Firm library, WIP and fees, Users and Activity. You only see the pages your role allows.

3. Roles and access

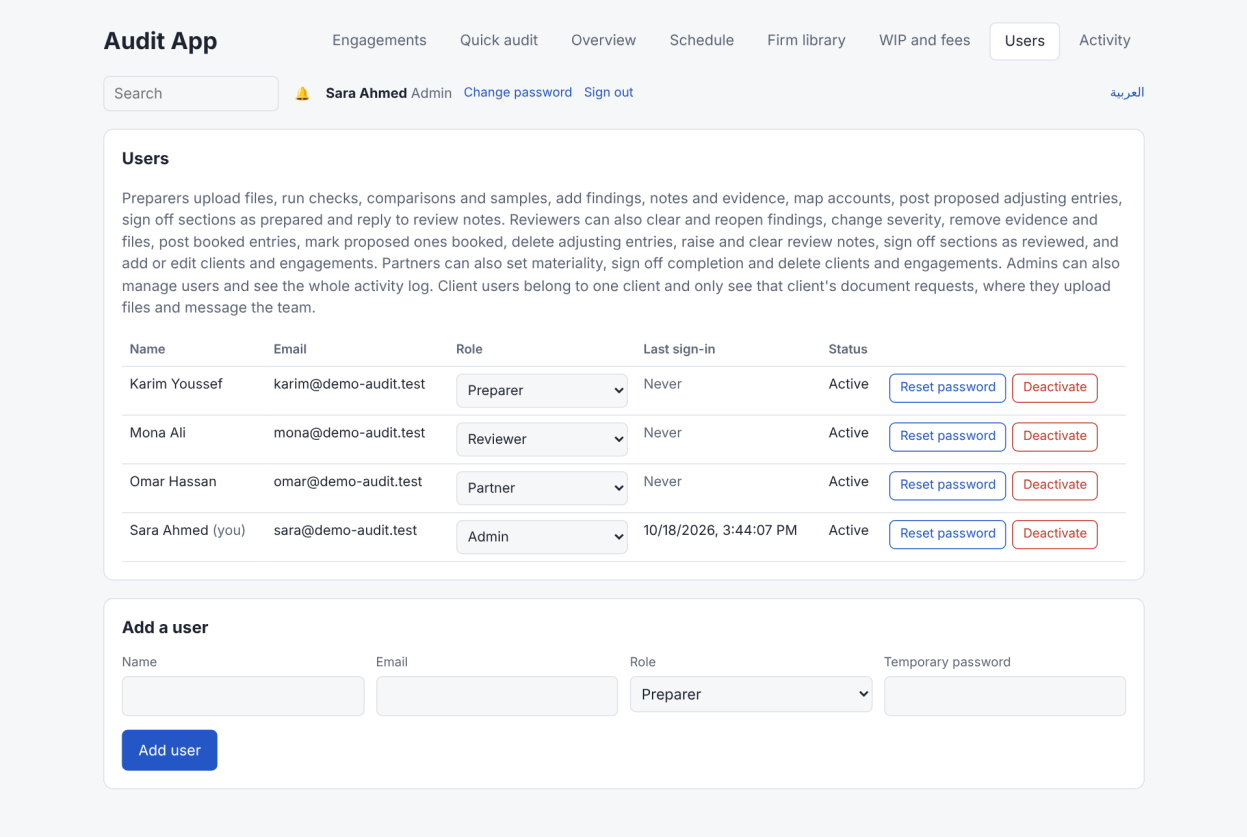

Each role can do everything the role before it can.

Role	What they can do
Preparer	Upload files, run checks, comparisons and samples, add findings, notes and evidence, map accounts, post proposed adjusting entries, sign off sections as prepared, reply to review notes, log hours.
Reviewer	Also clear and reopen findings, change severity, remove files and evidence, post booked entries, raise and clear review notes, sign off sections as reviewed, add and edit clients and engagements, post group elimination entries.
Partner	Also set materiality, decide on acceptance, sign off completion, lock engagements, write firm checklists and templates, see WIP and fees, delete clients and engagements.
Admin	Also manage users, approve account requests, choose each engagement's team, unlock engagements and see the whole activity log.
Client	People at the client. They only see the document request portal for their own company.

Engagement teams. Admins see every engagement. Everyone else sees only the engagements whose team they are on. An admin sets the team with **Change team** on the engagement page.

4. Administration (admins)

4.1 Adding users

The Users page

1. Open **Users** and fill in **Add a user**: name, email, temporary password and role.
2. For a client user, also pick the client they belong to.
3. Press **Add user**. Give the person their temporary password; they should change it after signing in.

You can change a user's role, deactivate them or press **Reset password**. Deactivating or resetting signs the person out.

4.2 Approving account requests

When someone asks for an account, the **Users** tab shows a number. Open **Waiting for approval**, choose a role (or link them to a client) and approve, or turn the request down.

4.3 Activity log

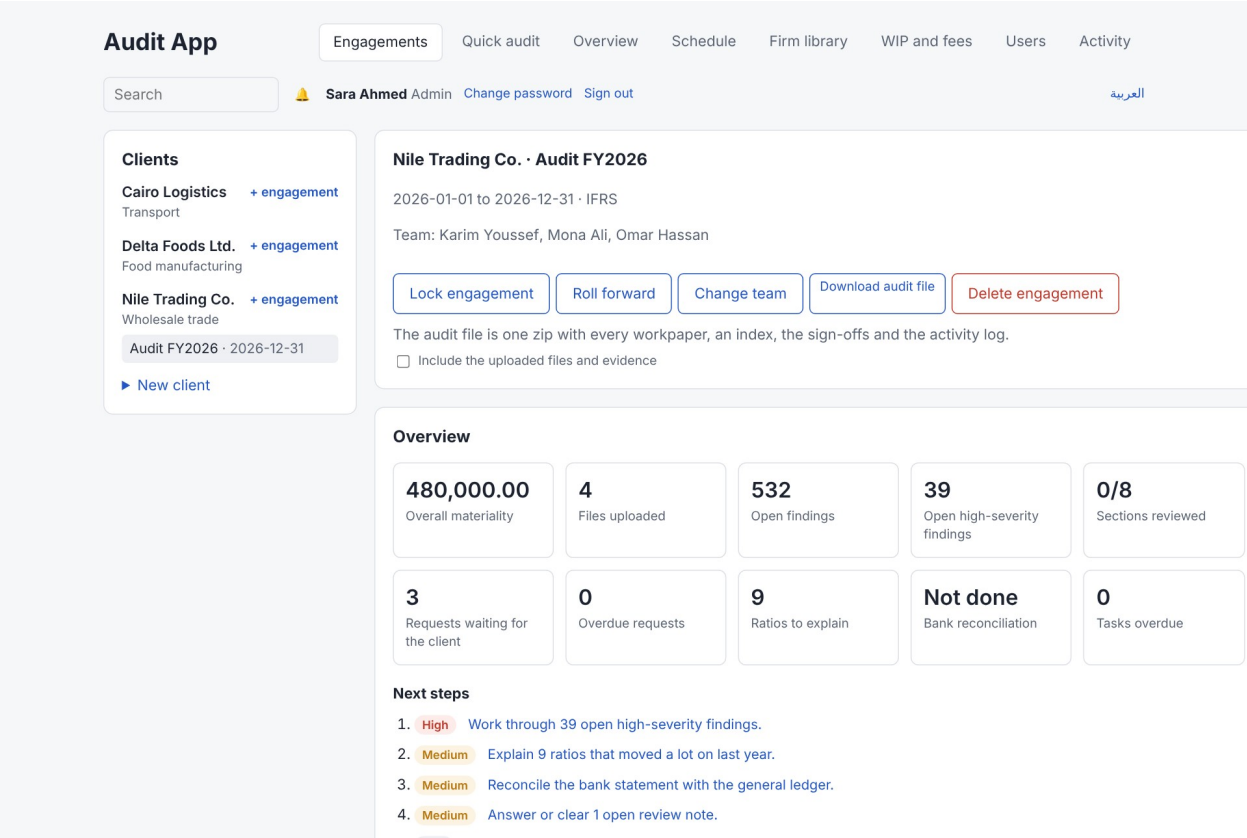

Activity shows every change, download and sign-in across the firm, with who, when, the engagement, the file fingerprint and the settings used. Filter by engagement, user or action. Each engagement page also has its own log.

5. Clients and engagements

5.1 Creating a client and an engagement

1. Open **Engagements** and press **New client**. Enter the client's name and details and press **Add client**.
2. Open the client and create an engagement: name, period start and end, and framework (for example IFRS).
3. The person who creates an engagement joins its team. An admin can add others with **Change team**.

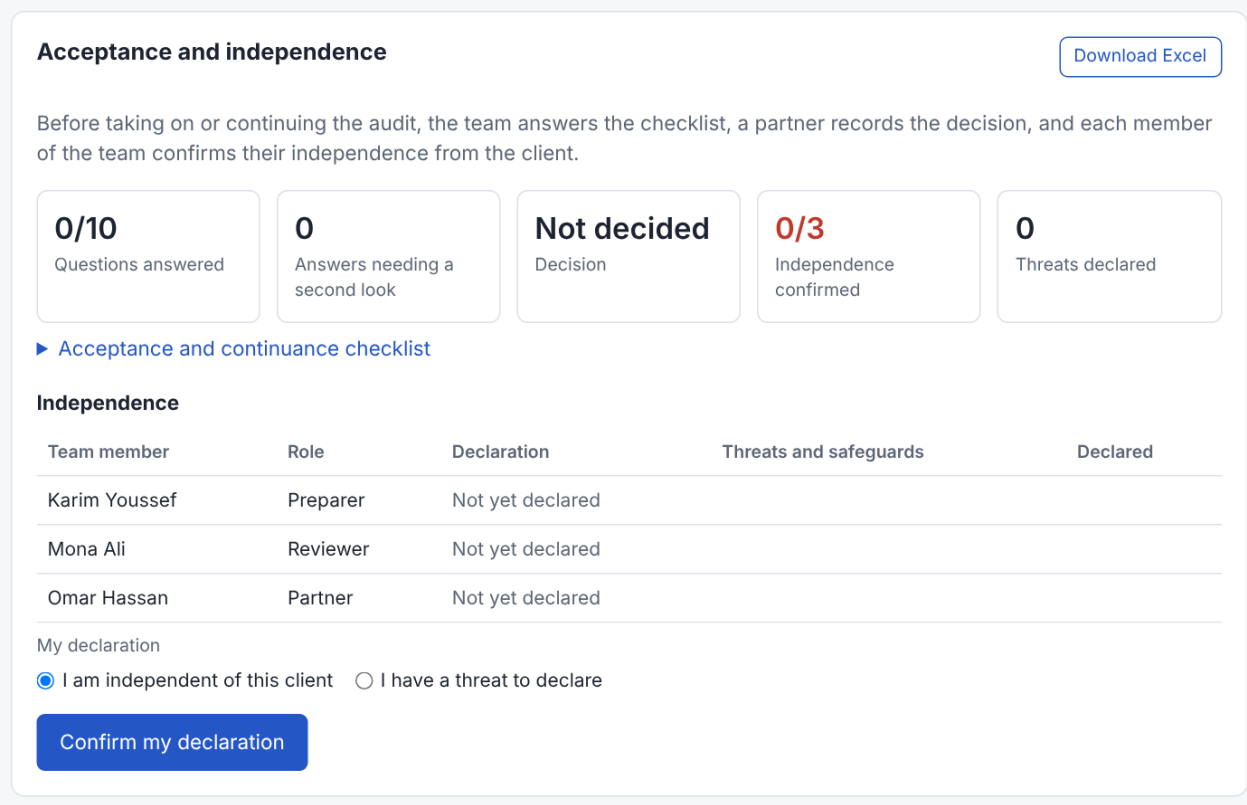

5.2 The engagement page

An engagement page with its Overview panel

Each engagement page is a set of panels, in roughly the order of an audit. The **Overview** panel at the top shows progress, open items and **Next steps** suggested by the app. Use the buttons at the top of the page to **Lock engagement**, **Archive**, **Roll forward**, **Change team**, **Download audit file** or **Delete engagement**.

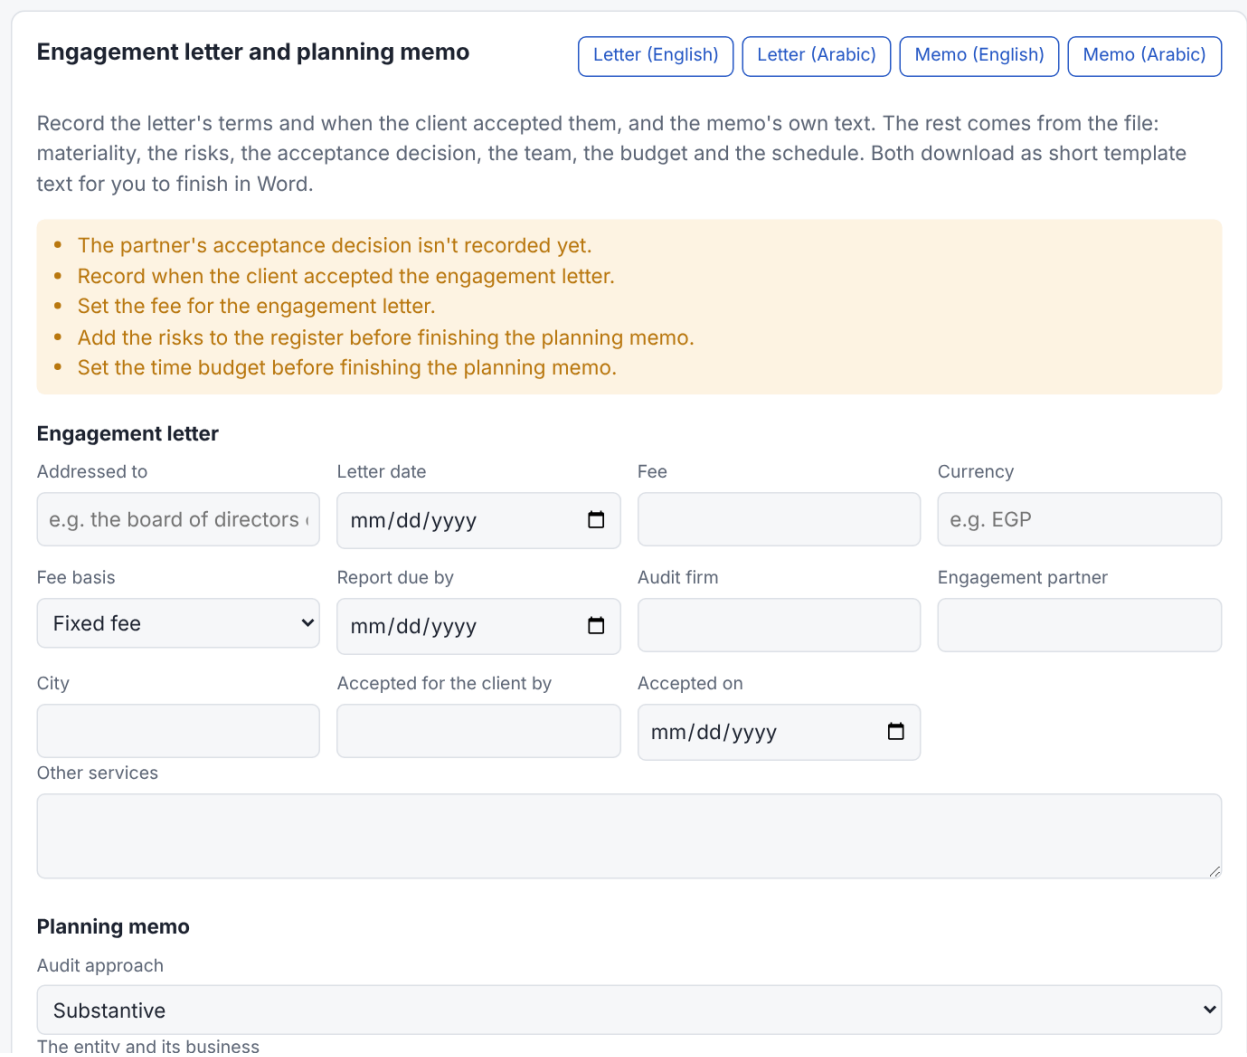

5.3 Acceptance and independence

Acceptance and independence

In **Acceptance and independence**, answer the acceptance and continuance checklist and press **Save checklist**. The partner records the decision with **Record decision**. Each team member confirms they are independent with **Confirm my declaration**.

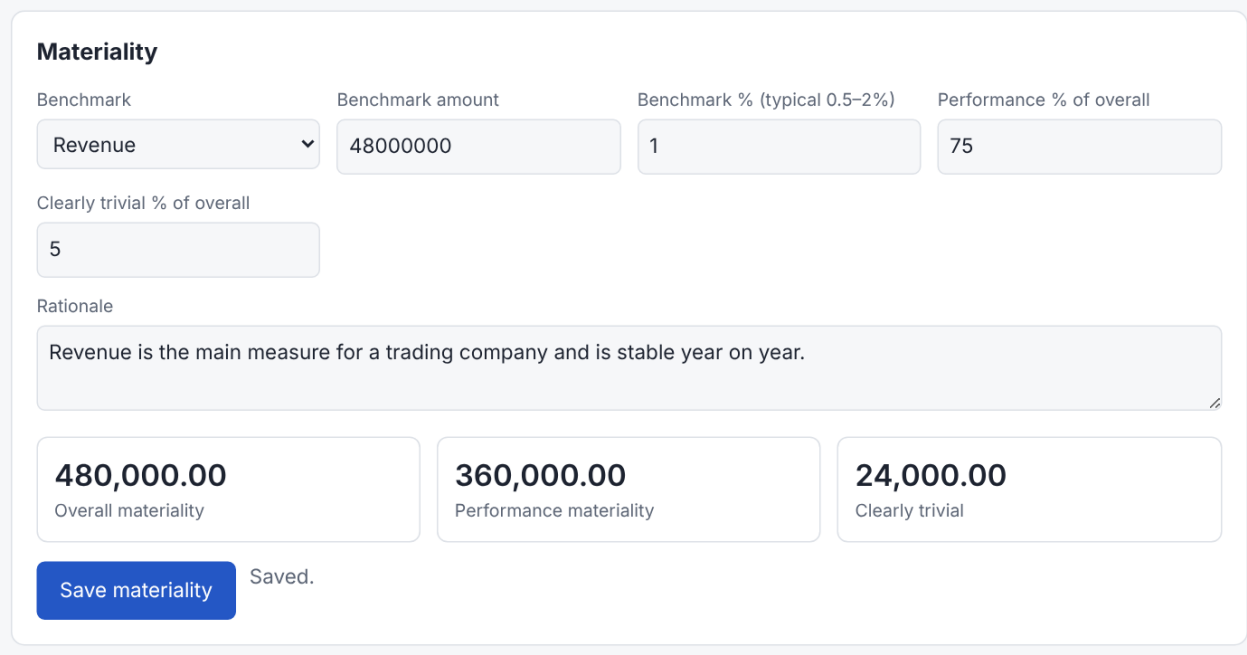

5.4 Engagement letter and planning memo

Engagement letter and planning memo

In **Engagement letter and planning memo**, fill in the fields and press **Save**. Download either document as a Word file in English or Arabic.

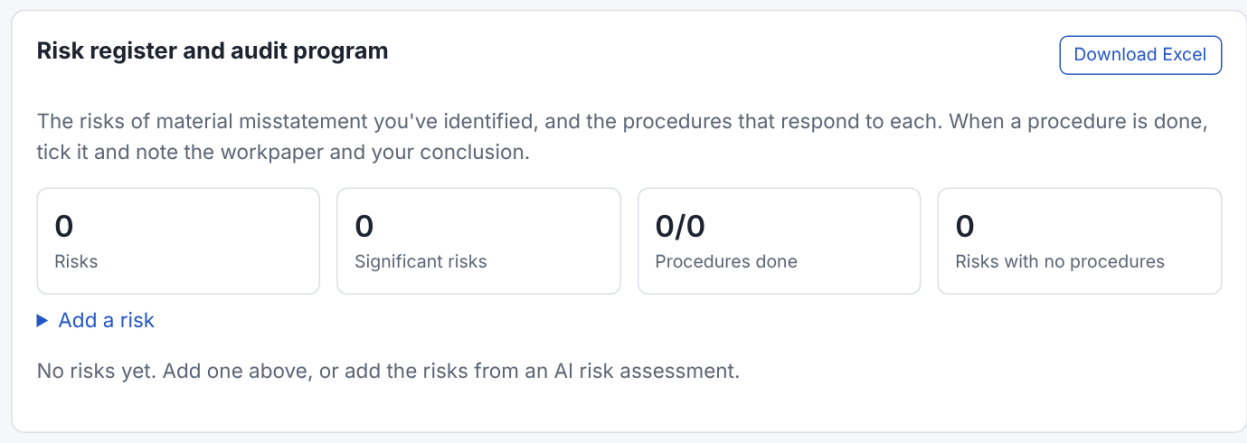

5.5 Materiality

The materiality calculator

1. In **Materiality**, pick a benchmark (profit before tax, revenue, total assets, equity or expenses) and a percentage.
2. The app works out overall materiality, performance materiality (75% by default) and the clearly trivial threshold (5% by default).
3. Write the rationale and press **Save materiality** (partners).

5.6 Risks and controls

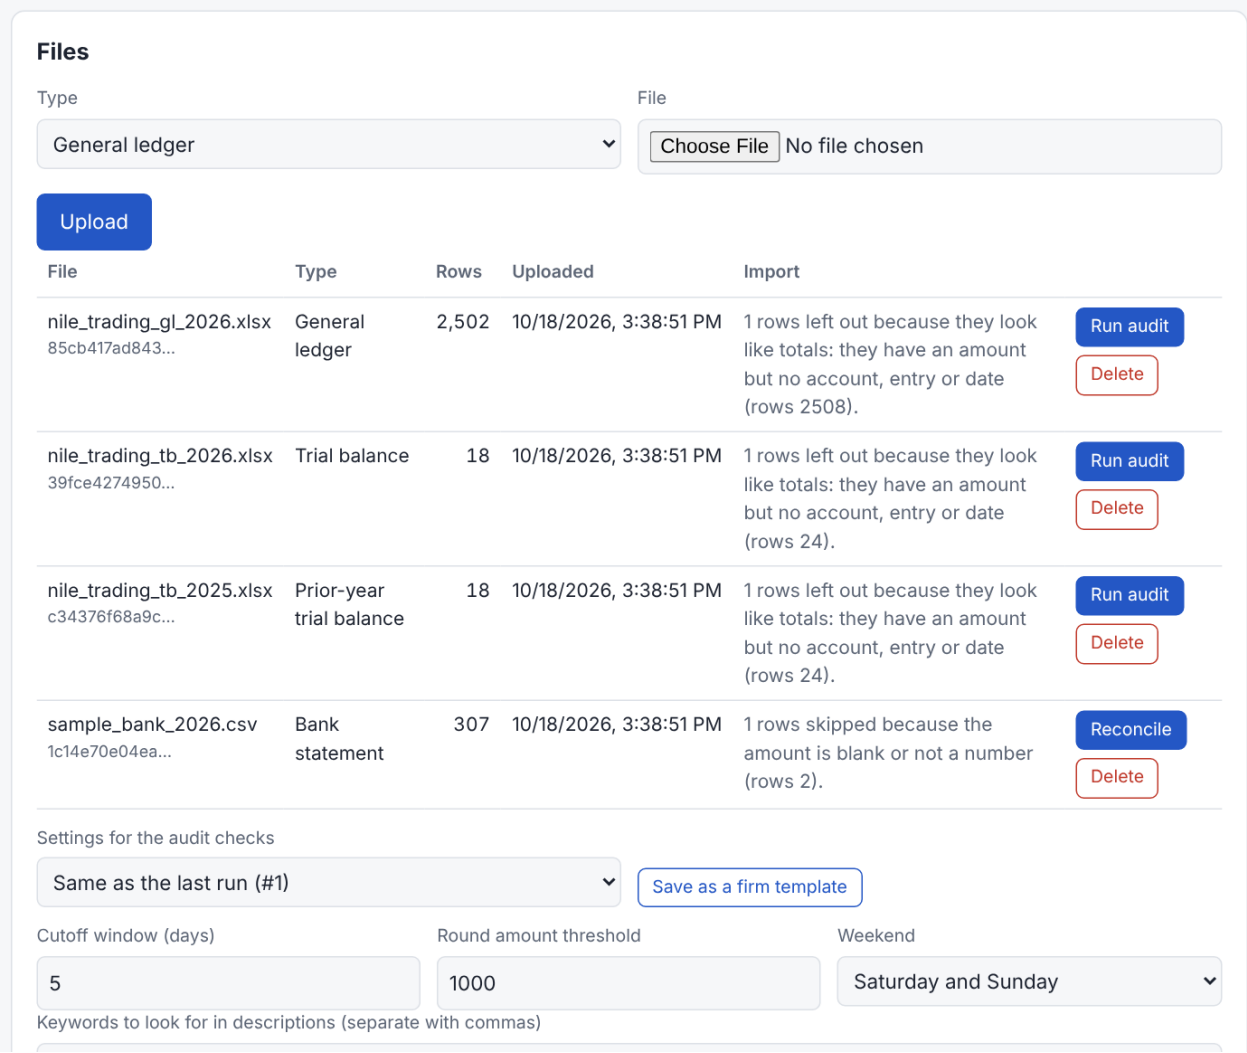

Risk register and audit program

- **AI risk assessment**: press **Assess risks with AI** to get a draft list of risks from the trial balance and engagement details. Press **Add these risks to the register** to keep them.

- **Risk register and audit program**: add risks by hand with **Add a risk**, rate them and link the procedures that answer each risk.
- **Internal controls**: record controls with **Add a control**. Use **Work out the sample size** for attribute testing and record the test results.
- **Last year's points**: press **Bring them in** to copy open findings from last year's engagement, or **Add a point by hand**, and follow each one up.

6. Files

6.1 Uploading

Uploading files

1. In **Files**, choose the **Type**: general ledger, trial balance, prior-year trial balance, bank statement, receivables or payables listing, fixed asset register, inventory listing, payroll register or a general list.
2. Choose the CSV or Excel file. For Excel files with several sheets, pick the sheet.

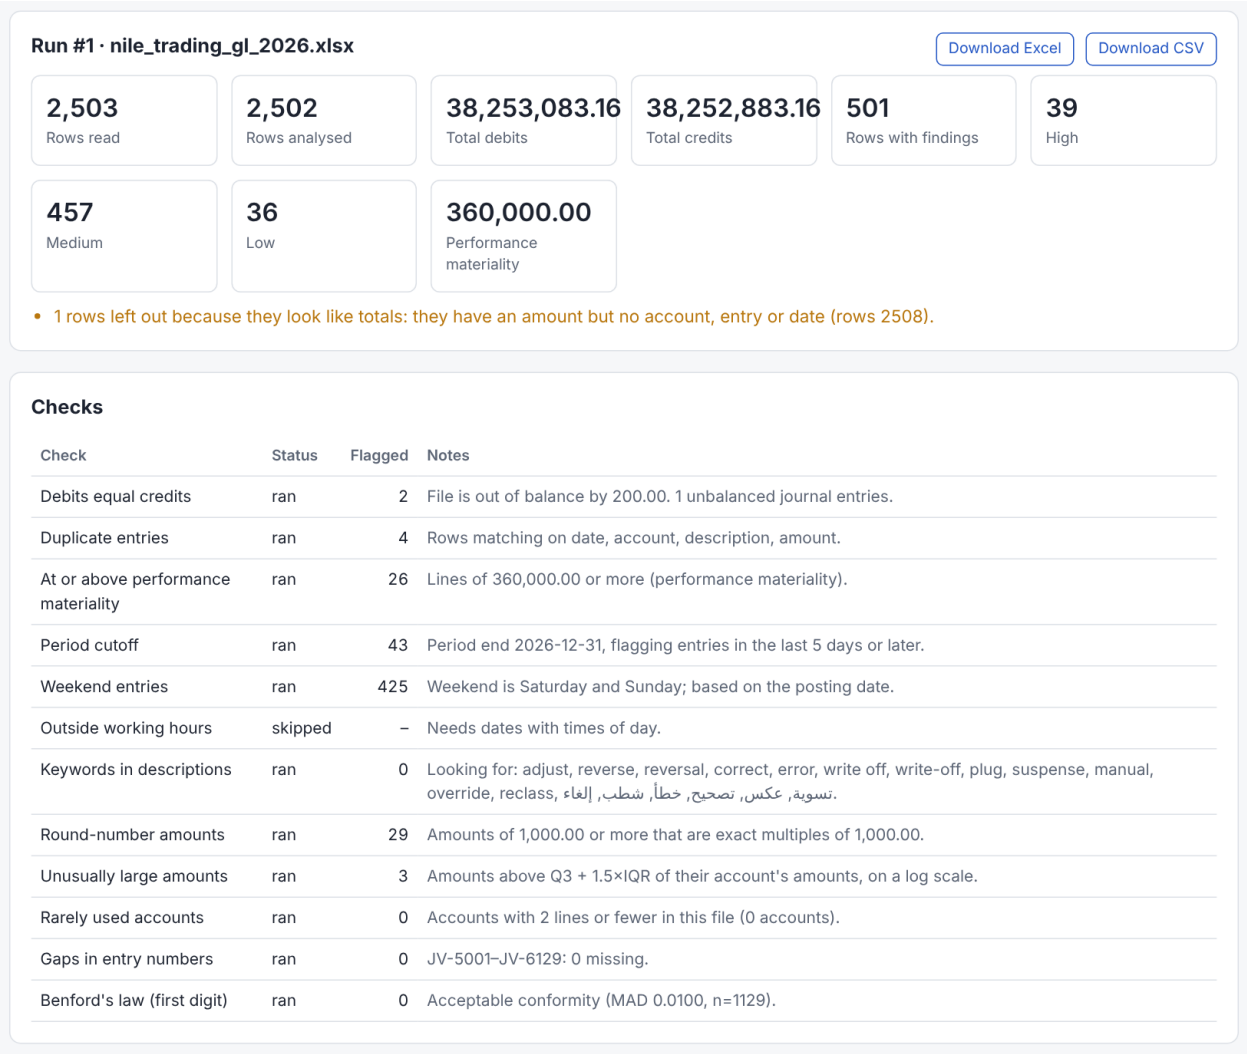

3. The app shows the first rows and suggests which column is the date, account, entry number, description, user, debit, credit or amount. Correct anything that is wrong.
4. Press **Upload**. The import summary shows rows read, control totals and any rows skipped and why.

Title rows above the table are skipped automatically. Amounts like 1,234.50, (500.00) and 20- are understood, and dates are read day first unless the file shows otherwise.

6.2 Firm templates for check settings

Under **Settings for the audit checks** you can choose a saved set of settings. Partners can press **Save as a firm template** or **Make it the firm default**.

7. Running the audit checks

Results of an audit run

1. Pick an upload and press **Run audit**.

2. The results show **Checks**, **Riskiest entries**, **Findings** and **Benford's law, first digit**.
3. Press **Download Excel report** for the workpaper.

Check	What it flags
Debits equal credits	The file or a journal entry doesn't balance
At or above performance materiality	Lines at or above performance materiality
Duplicate entries	Same date, account, description and amount
Period cutoff	Entries after the period end, posted late, or near the period end
Weekend entries	Entries posted on a weekend
Round-number amounts	Exact multiples of the round threshold
Unusually large amounts	Amounts far above their account's usual range
Benford's law	First-digit pattern that doesn't conform
Gaps in entry numbers	Missing journal numbers
After-hours postings	Entries posted late at night
Keywords	Descriptions with words such as "adjust" or "reverse"
Rarely used accounts	Accounts that are seldom posted to

Each entry also gets a risk score, so **Riskiest entries** lists the entries that tripped the most checks first.

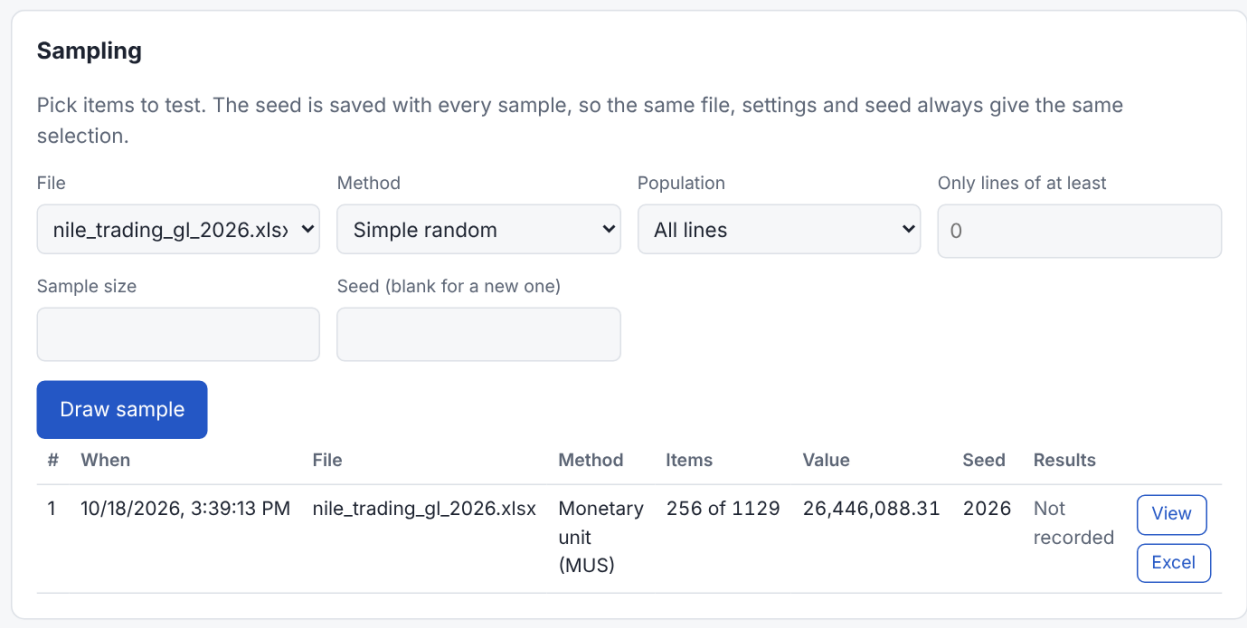

The **Quick audit** page runs the same checks on a file without saving anything.

8. Analysis tools

All of these are panels on the engagement page and save their results with the engagement.

- **Prior-year comparison**: pick this year's and last year's trial balances and press **Compare**. Accounts with large changes, new or closed accounts and sign changes are flagged.
- **Ratios**: liquidity, profitability and gearing ratios against last year, with warnings that may point to going-concern doubts.
- **Analytical procedures and proofs in total**: set an expectation (for example payroll = staff × average pay) and compare it to the recorded amount. Differences above your threshold are flagged.
- **Stratification and summaries**: press **Analyse** to see amounts by band, by account and by user, and field statistics.
- **Who posted what**: press **Look at who posted** to see entries posted and approved by the same person, and who posts to cash and revenue.
- **Account pairs**: press **Look at the account pairs** to see which accounts are posted against each other and spot unusual pairs.
- **Ledger explorer**: filter the ledger by date, account, user, amount or text, and pivot it. Press **Explore**.
- **Match two files**: compare two lists (for example vendors and employees) on bank account, phone or name, then **Find matches**.
- **Receivables and payables aging**: upload a listing and press **Age the listing** to see balances by age band and items to look at.

9. Sampling and vouching

Sampling

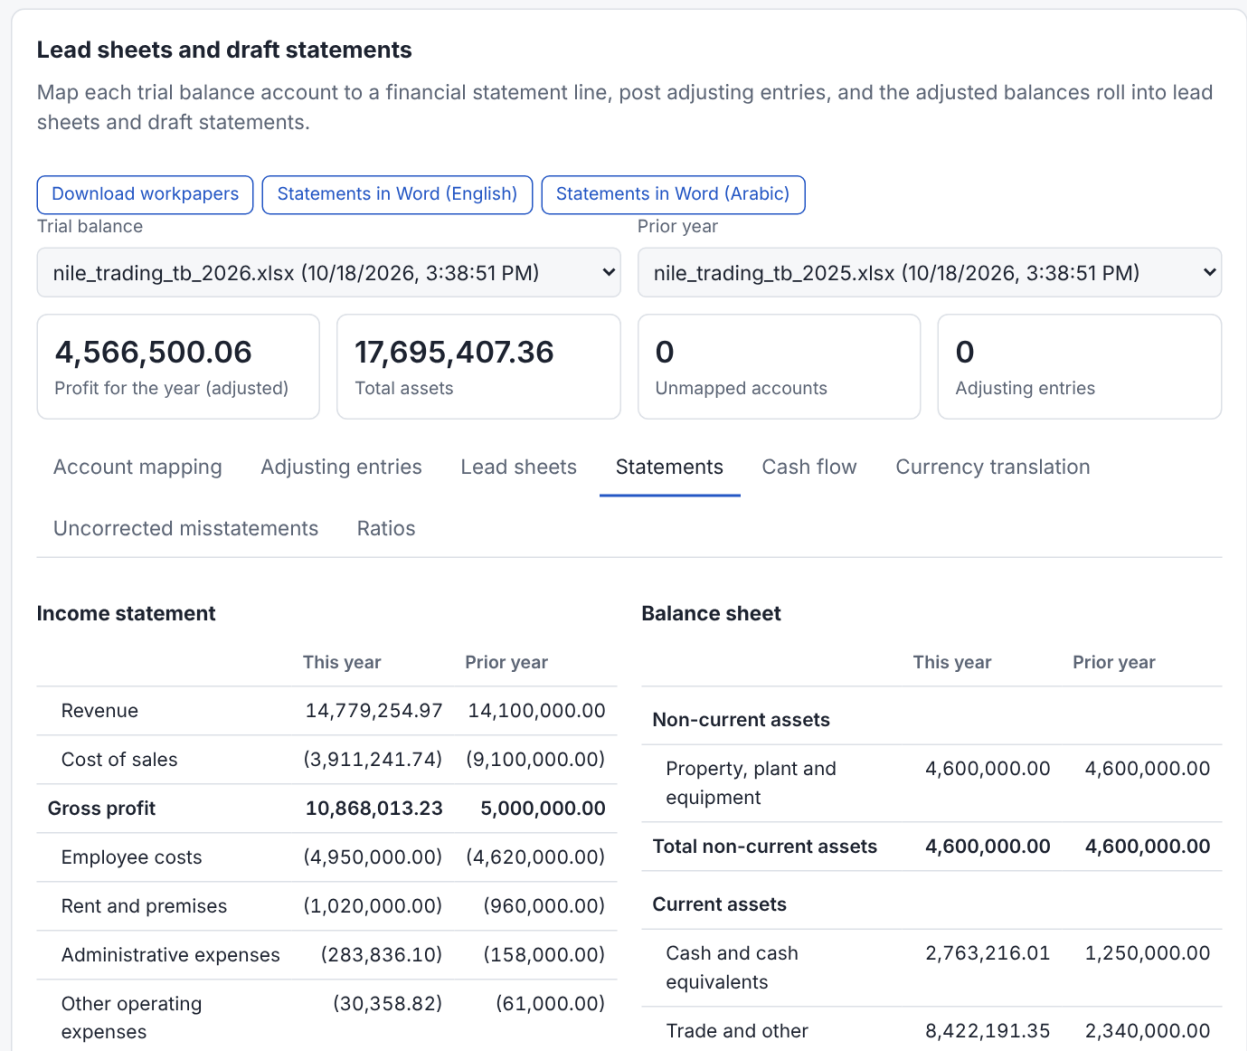

1. In **Sampling**, pick the upload and method: random, systematic or monetary unit sampling (MUS).
2. Choose the population (all lines, debits or credits) and a minimum amount if needed.
3. For MUS, leave the sample size blank to calculate it from the confidence level, tolerable misstatement and expected misstatement.
4. Press **Draw sample**. The seed is saved, so the same sample can be drawn again.
5. Download the Excel workpaper, test the items, then enter the audited amounts under **Results of testing** and press **Save results**. The app projects the misstatement to the population.
6. To vouch an item, press **Vouch** and attach the invoice or document. The AI can read the document and compare its amount, date and party to the ledger line.

10. Specialist areas

- **Bank reconciliation**: upload the bank statement, tick the cash accounts and press **Reconcile**. The app matches ledger and bank lines and lists deposits in transit, outstanding payments and items not in the books.
- **Read documents with AI**: upload a bank statement or invoice as PDF or image and press **Read with AI**. The app lists possible matching ledger entries.
- **Contracts and minutes**: upload a contract or board minutes and press **Summarise with AI**.
- **External confirmations**: add confirmation requests by hand or pick them from a receivables or payables listing, then track replies and differences.
- **Related parties**: list related parties and press **Scan the ledger** to find transactions with them.
- **Fixed asset register**: upload the register and press **Look at the register** to tie it to the trial balance and review additions, disposals and depreciation.

- **Inventory count**: press **Pick the items to count**, record counts, add items found on the floor and sign the count off.
- **Payroll tests**: upload the payroll register and press **Test the payroll** to find duplicate employees, bank accounts and payroll-to-ledger differences.
- **Leases (IFRS 16)**: **Add a lease** to calculate the right-of-use asset, lease liability and schedule.
- **Expected credit losses (IFRS 9)**: set the loss rate for each age band to build the provision matrix.
- **Loans and covenants**: **Add a loan** and **Add a covenant**, then test each covenant against the figures.
- **Accounting estimates**: **Add an estimate** and review how last year's estimates turned out.
- **Disclosure checklist**: answer the IFRS disclosure items, or upload the financial statements as a PDF and press **Ask the AI to check them**.
- **VAT reconciliation**: **Add a return** and compare VAT returns with the ledger.
- **Group consolidation**: **Add component** for each subsidiary, set component materiality and **Add an elimination**. Only reviewers and above can post or delete eliminations.
- **Currency translation**: translate a foreign-currency trial balance with closing and average rates and press **Translate**.

11. Lead sheets and financial statements

Lead sheets and draft statements

Map each trial balance account to a financial statement line, post adjusting entries, and the adjusted balances roll into lead sheets and draft statements.

Download workpapers | Statements in Word (English) | Statements in Word (Arabic)

Trial balance: nile_trading_tb_2026.xlsx (10/18/2026, 3:38:51 PM)

Prior year: nile_trading_tb_2025.xlsx (10/18/2026, 3:38:51 PM)

4,566,500.06	17,695,407.36	0	0
Profit for the year (adjusted)	Total assets	Unmapped accounts	Adjusting entries

Account mapping | Adjusting entries | Lead sheets | Statements | Cash flow | Currency translation | Uncorrected misstatements | Ratios

Income statement

	This year	Prior year
Revenue	14,779,254.97	14,100,000.00
Cost of sales	(3,911,241.74)	(9,100,000.00)
Gross profit	**10,868,013.23**	**5,000,000.00**
Employee costs	(4,950,000.00)	(4,620,000.00)
Rent and premises	(1,020,000.00)	(960,000.00)
Administrative expenses	(283,836.10)	(158,000.00)
Other operating expenses	(30,358.82)	(61,000.00)

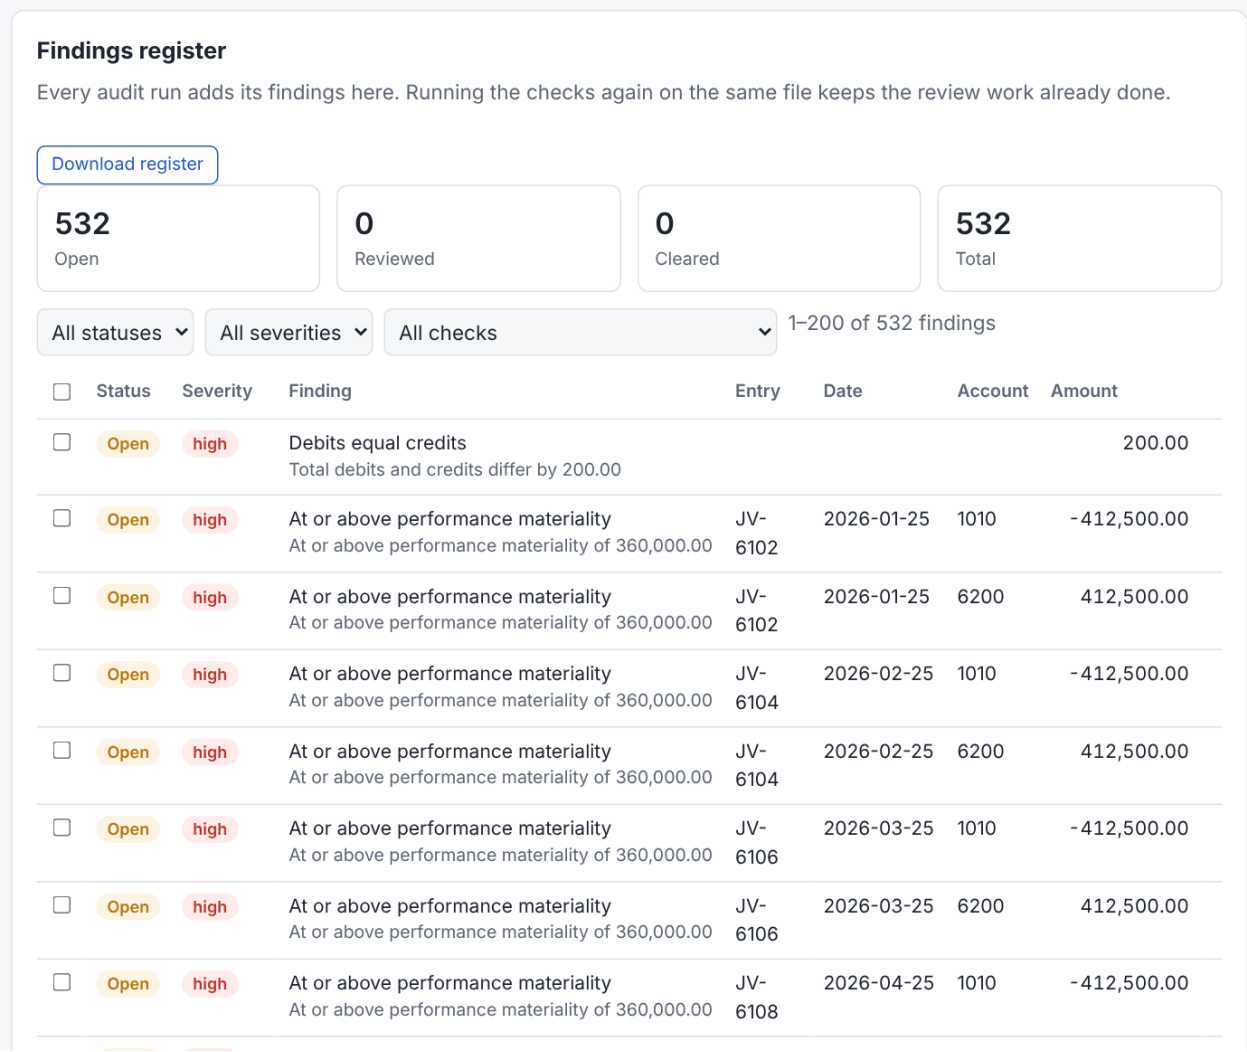

Balance sheet

	This year	Prior year
Non-current assets		
Property, plant and equipment	4,600,000.00	4,600,000.00
Total non-current assets	**4,600,000.00**	**4,600,000.00**
Current assets		
Cash and cash equivalents	2,763,216.01	1,250,000.00
Trade and other	8,422,191.35	2,340,000.00

Draft financial statements

1. In **Lead sheets and draft statements**, open **Account mapping**. The app suggests a statement line for each account; press **Suggest unmapped with AI** for the rest, then **Save mapping**.
2. Under **Adjusting entries**, post adjusting, reclassification or proposed entries and press **Post entry**. Entries must balance. Preparers post proposed entries; reviewers post booked ones.
3. See the **Lead sheets**, **Statements** (income statement and balance sheet with comparatives), **Cash flow**, **Uncorrected misstatements** and **Ratios**.
4. Use **Tick marks** to tick figures with the firm's legend and cross-reference them.
5. Download the statements as Excel, or as a Word file in English or Arabic.

12. Findings

Findings register

Every audit run adds its findings here. Running the checks again on the same file keeps the review work already done.

Download register

532	0	0	532

The findings register

- Every run adds its findings to the **Findings register**. Running again on the same file keeps your work.
- Each finding moves from Open to Reviewed to Cleared. Clearing needs a note.
- Use **Mark reviewed**, **Clear** and **Reopen** on one or many findings, and **Add a finding by hand** for exceptions found in testing.
- Attach **Evidence** files; every change is kept in the **Review trail**.
- **AI assistant**: press **Explain this entry** or **Draft a write-up**, then **Add as a note** if you want to keep it.
- **Management response**: the client can reply to a finding through the portal with an action plan.
- **AI management letter**: press **Draft with AI** to draft the management letter from the findings.

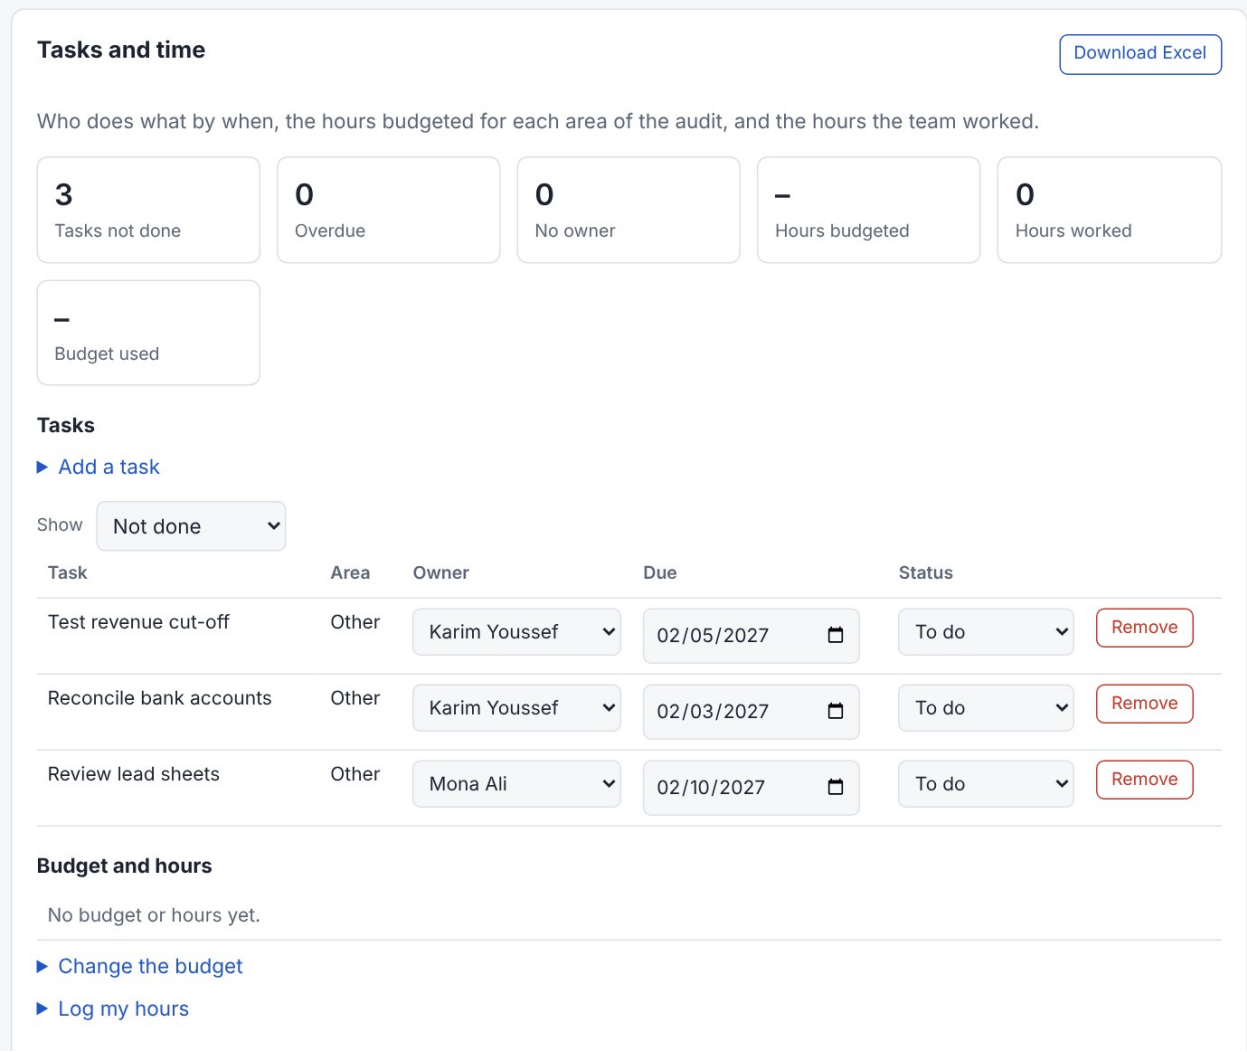

13. Working with the client

Client requests

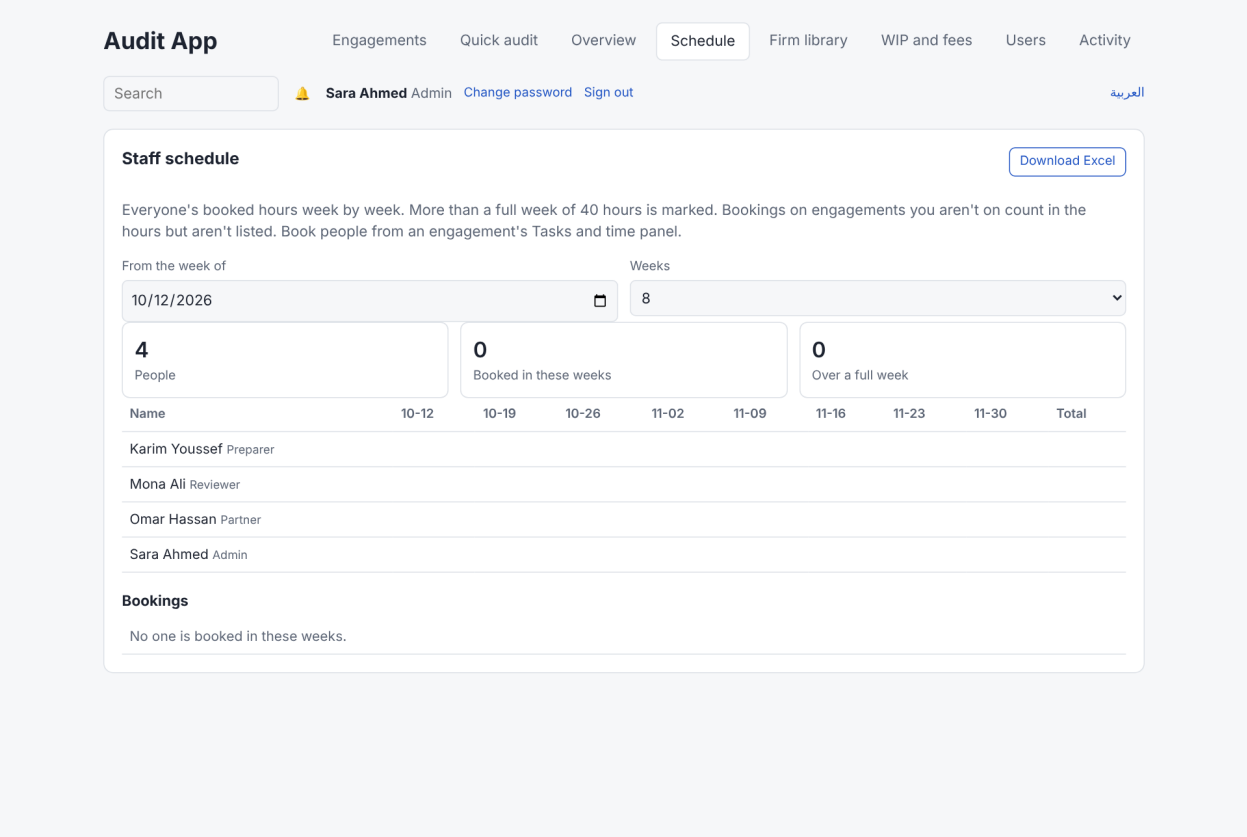

1. In **Client requests**, press **Ask for a document** for each item, with a due date. Use a firm request list from the **Firm library** to add many at once, then **Send the list**.
2. Client users sign in and see only their own requests. They upload files and send messages.
3. The team accepts each file or sends the request back saying what is missing. Overdue requests are flagged.

14. Team management

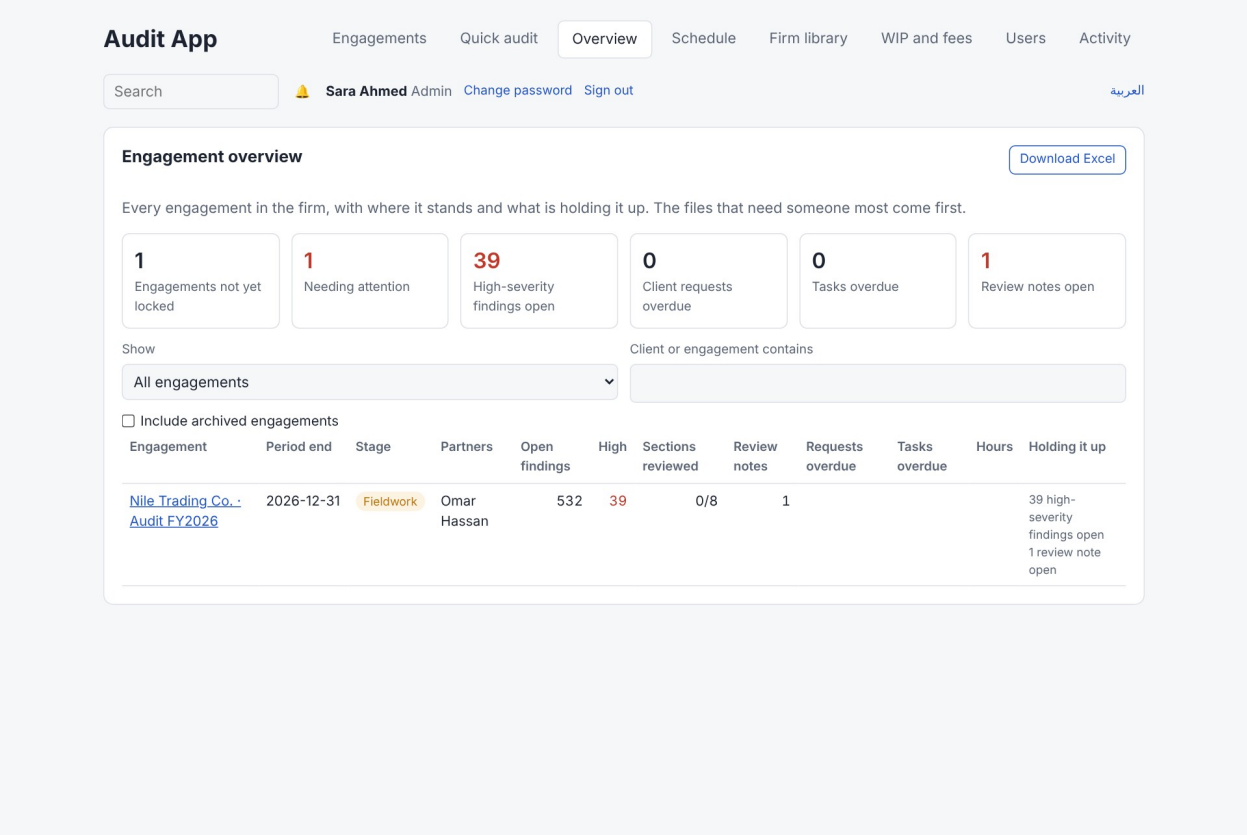

Tasks and time

- **Tasks and time**: add tasks with owners and due dates, set the budget, and use **Log my hours**. **My tasks** on the Engagements page lists everything assigned to you.
- **Staff bookings**: **Book someone** on the engagement for a period. The **Schedule** page shows bookings across the firm and flags anyone above 40 hours a week.

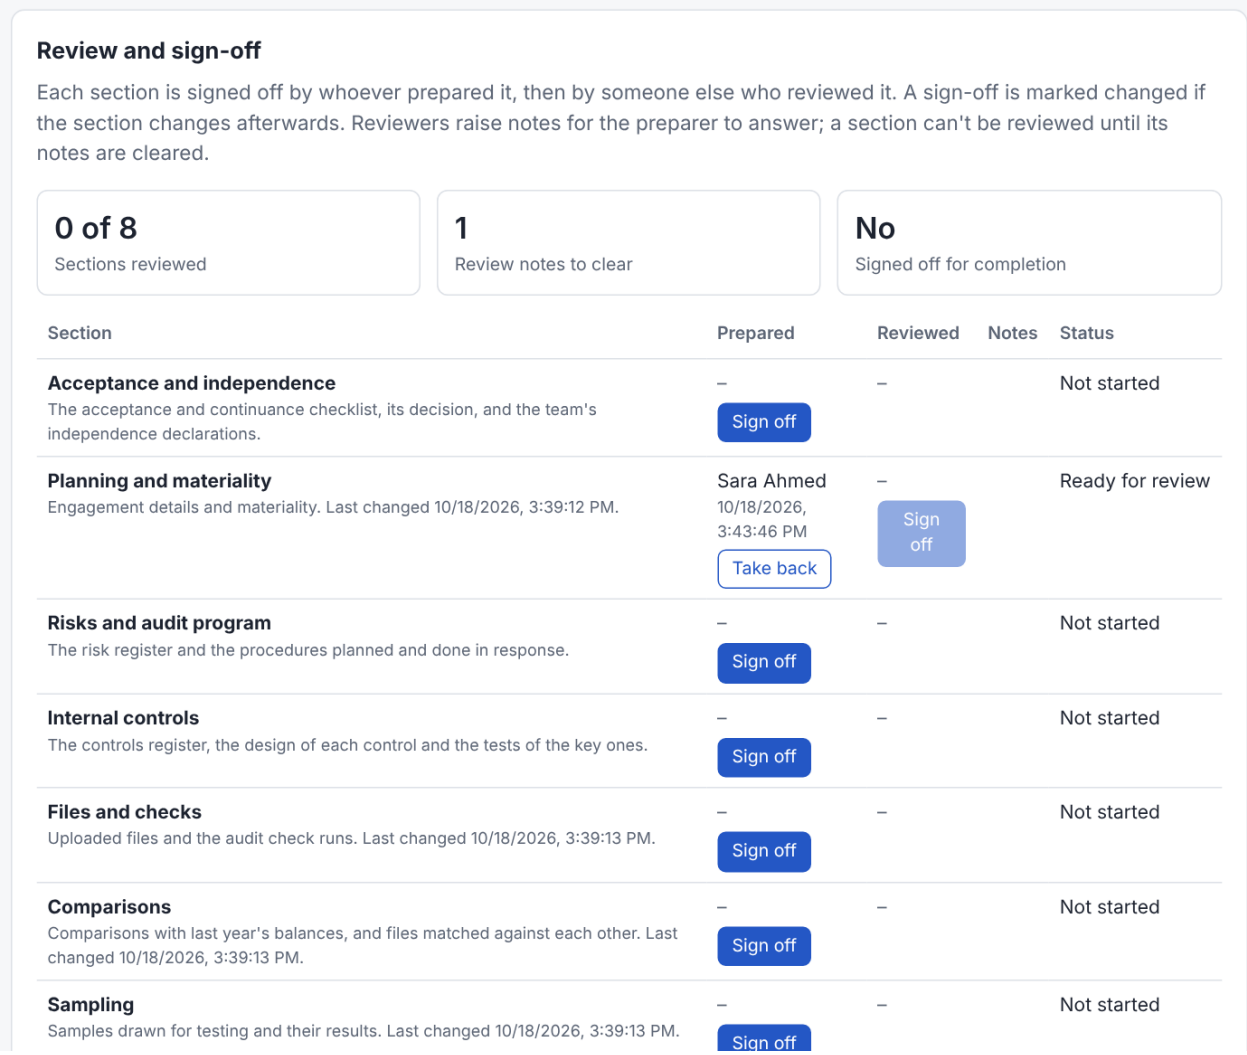

The staff schedule

- **Fees and billing**: **Record an invoice** against the engagement. Partners and admins see the firm's **WIP and fees** page and set **Hourly rates**.
- **Overview** (reviewers and above): all engagements with their progress, open findings and review notes.

Overview of all engagements

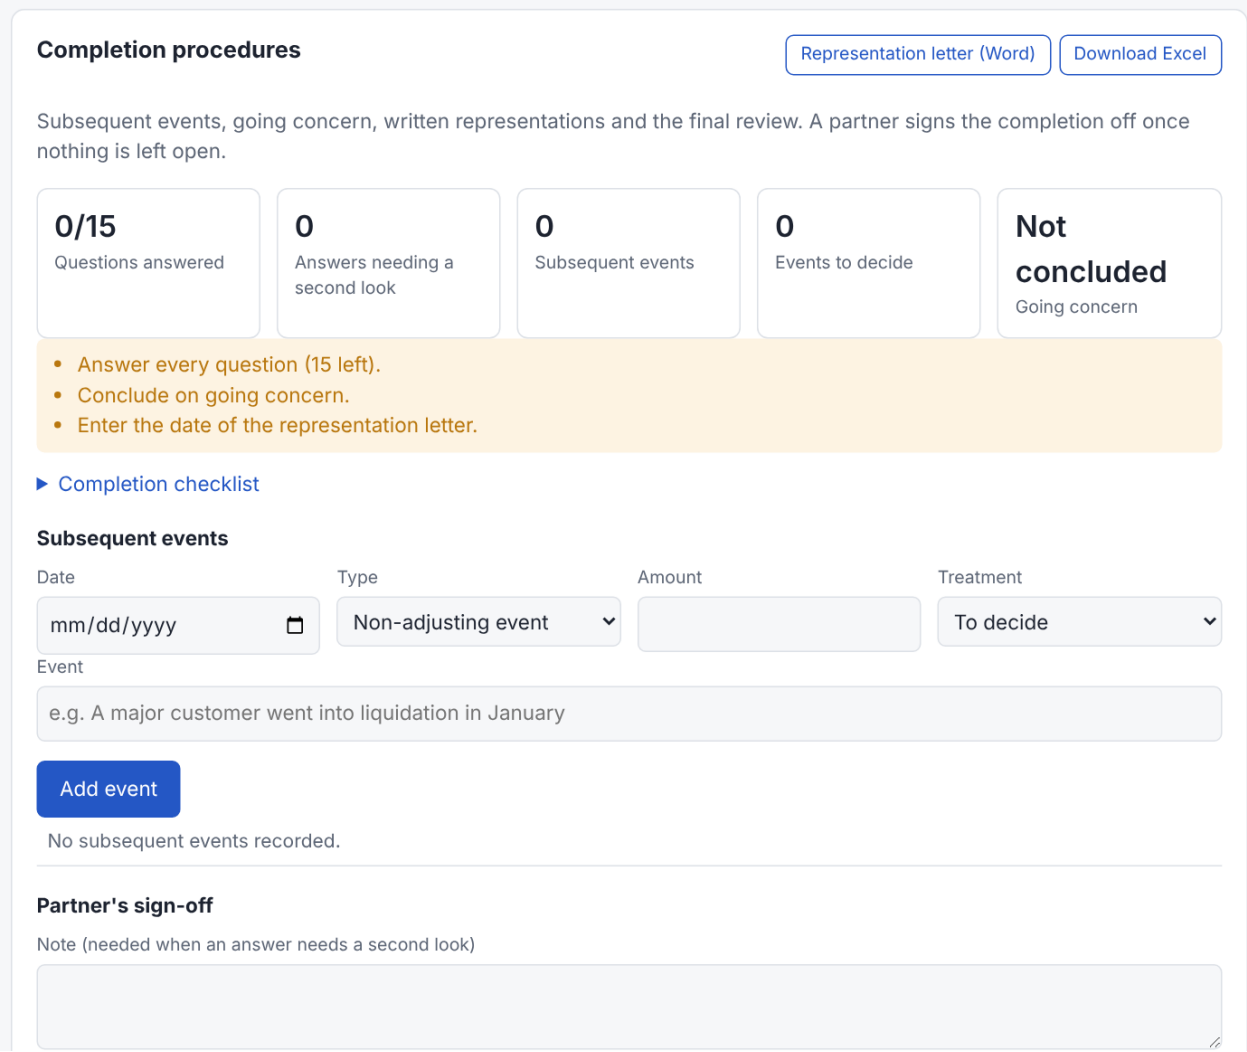

15. Review and sign-off

Review and sign-off

1. In **Review and sign-off**, the preparer signs off each section as prepared.
2. A different person signs it off as reviewed.
3. Reviewers **Raise a review note** on a section; the preparer replies and the reviewer clears it. A section with open notes can't be signed off as reviewed.
4. If a section changes after sign-off, the sign-off is marked as changed so the reviewer looks again.

16. Completion and reporting

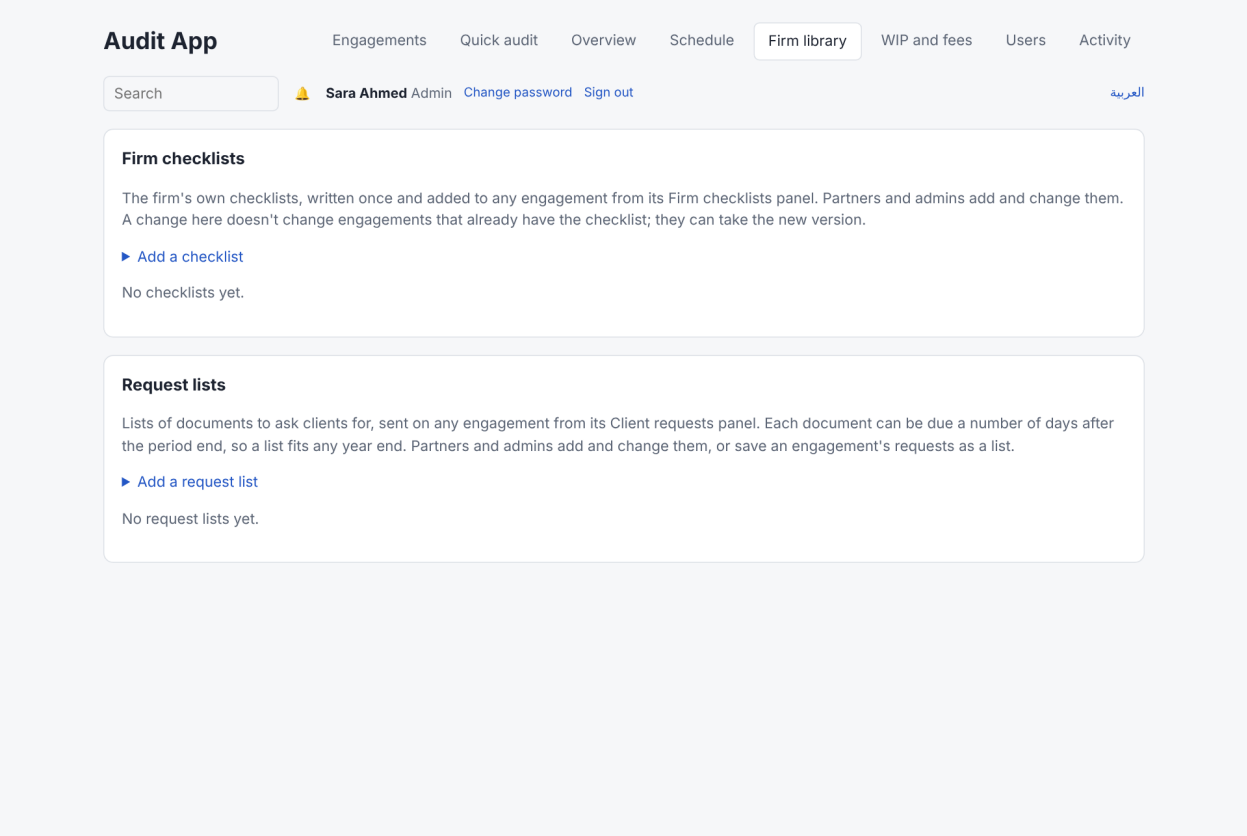

Completion procedures

- **Completion procedures**: answer the **Completion checklist**, record the **Going concern** assessment and **Subsequent events**, and prepare the written representations letter.
- **Firm checklists**: add the firm's own checklists to the engagement and answer them.
- **Engagement quality review**: the named quality reviewer works through the checklist and presses **Sign off the quality review**.
- **Auditor's report draft**: choose the opinion type, add **Key audit matters**, then **Save draft** and **Preview**. Download it as Word in English or Arabic.
- The partner presses **Sign off completion** once every other section is reviewed.

17. Closing the file

- **Download audit file**: one zip with every workpaper, an index, the sign-offs and the activity log. Tick **Include the uploaded files and evidence** to add the source files.
- **Lock engagement** (partner): nothing more can be changed. An admin can **Unlock** with a reason. A locked engagement can be archived.
- **Roll forward**: start next year's engagement, choosing what comes across (trial balance, mapping, materiality settings, request list, team and other set-up). Press **Create next year's engagement**.

18. Firm library

The Firm library page

Partners keep firm-wide material on the **Firm library** page:

- **Firm checklists** that teams copy into their engagements.
- **Request lists**: standard client request lists to add in one step.
- Tick mark legend and check-setting templates.

19. Tips and troubleshooting

- If a page looks wrong after an update, press Ctrl+F5 to reload it without the browser cache.

- If a file won't import, check the column mapping screen and the import warnings.
- AI features send the data they need to the Claude AI service only when someone presses an AI button, and every request is logged. They are hidden if the server has no AI key.
- Everything you change or download is logged, so ask an admin if you need to know who did something.
